***Allowance of Application # 09/858,175***

1. The following communication is in response to applicant's filing on 15 May 2001.

***Reasons for Allowance***

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the information described in the article authored by Pavlat et al., entitled *An Energy Management System to Improve Electric Vehicle Range and Performance*. The improvement comprises an automated system for predicting the life of a plurality of batteries for use in selecting a battery for use in a selected vehicle, wherein a user is prompted to select a battery, a vehicle, a climate and a driving habit; whereby a computer receives the user entered selections and calculates a life expectancy for the battery as a function of the selected vehicle, climate and driving habit. This patentable distinction is included in each of the independent claims, nos. 1, 15 and 20. The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible system for predicting the life of a plurality of batteries having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 7, line 7 through page 22, line 10, and Figures 1-15. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.

***Response Guidelines***
